B-1 Location of Ground Water Basins, Los Angeles Region (No.4)

INTRODUCTION

This volume contains the ground water level elevation records for 1958-59, for the Los Angeles Water Pollution Control Board Region, and for San Luis Obispo and Santa Barbara Counties of the Central Coastal Water Pollution Control Board Region. Appendix A contains depth to ground water measurements and ground water surface elevations in wells in Central Coastal Region (the southern portion of Water Pollution Control Board Region No. 3), together with reference point elevations and the agencies from which the data were collected. Appendix B contains the same information for Los Angeles Region (No. 4).

To facilitate machine processing procedures for presentation of basic hydrologic data published in this report, numeric and letter codes were adopted and used to designate hydrologic areas, wells, and other pertinent notes. These codes are described in the following paragraphs.

Areal Designation Code

The areal designation code is based on a decimal numbering system using the form x-xx.xx, although in these appendixes machine limitations have required the shortening of this to the form xxxxx. The number to the left of the dash refers to the geographical region defined in Section 13040 of the State Water Code. The two digits to the left of the decimal point refer to a hydrologic unit. This unit generally consists of a major watershed which may include areas overlying both water-bearing and nonwater-bearing formations. For simplification, the designation is also given to groups of small adjacent watershed areas, with similar hydrologic conditions, which drain directly to the ocean. An example

of the latter is the Malibu Hydrologic Unit. The two digits to the right of the decimal point refer to a subunit within the hydrologic unit, including as before, areas overlying both water-bearing and nonwater-bearing formations. The locations and numerical codings for the hydrologic units and subunits within the area treated in this report are shown on Plates A-1 and B-1.

Well Numbering System

The well numbering system used in this report is that utilized by the United States Geological Survey and adopted by the Department of Water Resources. In this system, the well is assigned a number that is referenced to the township, range, and section subdivision of the Federal Land Survey wherein the well is located. Within the section, the location of the well is further delineated by dividing the section into 40-acre plots, called lots, lettered as follows:

D	C	B	A
E	F	G	H
	26		
M	L	K	J
N	P	Q	R

Within each of these lots, wells are numbered according to the order in which they were assigned state well numbers. For example, a well having the number 10N/18E-26A1,S, would be in Township 10 North, Range 18 East, Section 26, San Bernardino Base and Meridian, and would be the first well assigned a state well number in Lot A. In this report, well numbers are referenced either to the San Bernardino Base and Meridian (S) or to the Mount Diablo Base and Meridian (M).

For some wells, the letter following the section number is "X". This means that, although the well has been field located and its position accurately plotted with respect to other features in its neighborhood, the map control for the Public Land Survey currently available is too poor to warrant assignment of an accurate lot letter.

Reference Point Elevations

The reference point elevations for the majority of the wells for which data are shown in this volume were obtained by measurement, usually by engineering levels. However, in those instances when a direct measurement is not available, the reference point elevation was estimated from topographic maps. Estimated elevations are indicated by a double asterisk superscript immediately following the value.

Flowing or Dry Well

In the tabulations of ground water levels at wells in this volume, the code words "FLOW" and "DRY" are used in some instances in the column "Dist. R.P. to Water Surface, in feet". The word "FLOW" connotes an observation where water was freely flowing over the top of the casing because the piezometric elevation at the well was greater than the elevation of the top of the casing. The word "DRY" is used when no standing water was observed in the well because the depth to ground water was equal to or greater than the depth of the well.

Questionable Measurements

Certain of the values in the column "Dist. R.P. to Water Surface" in this volume may be followed with an asterisk superscript, which indicates a questionable measurement. The depths to ground water measurement may be questionable because (a) the well was being pumped at the time of

measurement, (b) a nearby pump was operating, (c) the casing was leaking or wet, (d) the well was pumped recently, or (e) the measurement was determined to be questionable by the computer. Items "a" through "d" were noted by the fieldmen and included when the data were procured from the various agencies which collected them. As for item "e", the computer was programmed to "flag" all measurements for which the change in elevation was in excess of two feet per week, an arbitrary value used to indicate that the change may be unreasonable. This "reasonableness check" was installed primarily to find errors in transcription and to point out possible pumping error measurements. Measurements indicated to be unreasonable were reviewed and, where possible, errors resulting from incorrect transcription removed. Within the limits of the data processing, it was not possible to include in these appendixes the reason for each questionable measurement; however, the reason for an asterisk on any given measurement may be obtained from the Southern California District Office of the Department of Water Resources.

Agency Code

In the following list are the code numbers for the agencies from which data on ground water levels were obtained. The agency code consists of a five-digit number, the first digit of which is a water pollution control board region number. Thus, 41101 refers to agency 1101 in Region 4. Because of limitations of punch card space, the agency code has been shown in these appendixes as a four-digit number without the region number. Therefore, the four-digit agency code should always be referred to the region in which the station or well is located, as duplicating numbers do occur with the four-digit agency code.

Agency Code for Central Coastal Region (No. 3)

Agency Code	Agency Name
5000	U. S. Geological Survey at Santa Barbara
5050	Department of Water Resources

Agency Code for Los Angeles Region (No. 4)

Agency Code	Agency Name
1051, 3051 and 5050	Department of Water Resources
1101	Los Angeles County Flood Control District
1200	Los Angeles Department of Water and Power
2100	Ventura County Flood Control District
2400	United Water Conservation District
3102	Orange County Flood Control District
3106	San Bernardino County Flood Control District
4206	Long Beach Water Department
4209	Oxnard Water Department
4748	San Antonio Water Company
5003	U. S. Navy at Port Hueneme
